

Statistics Training vs Six Sigma Training – A Comparison of Pros and Cons

Ledi Trutna & Diana Ballard, Consultants

Statistics Training versus Six Sigma training, what is the difference? At SEMATECH, the Qualification Plan for equipment was the original framework for the statistics curriculum, i.e. each class supported a phase of the process of qualifying a piece of equipment. Six Sigma focuses on DMAIC -- Define, Measure, Analyze, Improve, Control -- method of process improvement. This presentation will compare and contrast these two approaches to training.
