ROADMAP DISCUSSION

Deliverables:

Guidelines by year end and pilot system by year end are two different things

There is pilot-able implementation out there now. Need to quickly get guidelines in place so that further effort is in the right direction

Supplier issue: wide variance in tool maturity

Cannot generate an all encompassing solution – only a framework

VPN might be the ultimate solution, but for installed fabs things are probably not going to be re-capitalized/designed. (The usual legacy issue).
